Why spend time shopping for individual components from multiple vendors for your oocyte rig?

The ALA Xenoplace™ Workstation is an affordable and compact two-electrode voltage clamp system built around high-end components that work well as a system. It’s available as a discounted package and can be configured for specialized applications.

The Xenoplace™ WorkStation consists of the following:

* npi TEC-03X High performance two-electrode voltage clamp amplifier with model cell
* ALA VC3-4PG 4 channel gravity fed perfusion system
* 2 x MM-33 mechanical manipulators
* ALA’s small volume Xenoplace™ Recording Chamber with built-in reference electrodes
* Set of electrode holders, current headstage adapter, and model cell
* Binocular microscope with boom stand

Xenoplace™ Recording Chamber references:

Other configurations are possible - please contact the factory for details
